

Recombinant Cys-Protein G (rCysProteinG) Catalog Number: 1002-02

Description Protein G, similar to Protein A, is an immunoglobulin-binding protein expressed in group C

and G Streptococcal bacteria but with different specificities. It binds to the constant region of many species of immunoglobulin G and can be used to detect, quantify and purify IgG antibodies and antibody/antigen complexes. This recombinant Protein G contains only IgG binding domains. It lacks the albumin-binding, cell wall and cell membrane binding domains to ensure maximum specific IgG binding capacity. Recombinant Cys-Protein G contains 196 amino acid residues, corresponds to amino acid 190-384 of the Streptococcus sp and a Cys

Source Escherichia coli

Molecular Weight Predicted 22.5kDa but migrates to 32kDa on SDS-PAGE.

residue at C-terminus.

Purity >95% by SDS-PAGE analyses.

Physical Appearance White lyophilized powder.

Formulation Lyophilized with no additives.

Endotoxin $< 1EU/\mu g$ of growth factor as determined by LAL method.

Reconstitution Reconstitute in sterile distilled water or saline.

Storage Storage Store at -20°C after receiving. Upon reconstitution, store at 2-8°C for up to one week. For

maximal stability, aliquot and store at -20°C. Avoid repeated freeze/ thaw cycles.

Usage This product is for research use only. It is not approved for use in humans, animals, or *in vitro*

diagnostic procedures.
